INTRODUCTION

The Trade of Canada Commodity Classification is a new document, intended to provide users of the monthly, quarterly and annual Trade of Canada publications with a guide to the statistical categories used. In addition to the Import and Export Commodity Classifications which are supported by an alphabetical index, it includes the Content of Import Commodity Categories, the Content of Export Commodity Categories and the Country Classification.

SUPERSEDES

The Trade of Canada Commodity Classification is a composite publication incorporating the former Import and Export Commodity Classification Manuals under one cover. Superseded, are the following publications:

12-521 Export Commodity Classification, Volume I, The Classification
12-522 Export Commodity Classification, Volume II, Numeric Index
12-523 Export Commodity Classification, Volume III, Alphabetic Index
12-524 Import Commodity Classification, Volume I, The Classification
12-525 Import Commodity Classification, Volume II, Numeric Index
12-526 Import Commodity Classification, Volume III, Alphabetic Index

No attempt has been made to reproduce the above manuals in their entirety. Nor was it intended to provide complete coverage of the commodities encountered in trade. This purpose is better served through the Canadian International Trade Classification (C.I.T.C.) and the related supplements.

The basis for the Import and Export Commodity Classifications and the C.I.T.C. is the Standard Commodity Classification (S.C.C.), which was developed in Statistics Canada as a tool for integrating statistical series derived from different sources.

RELATIONSHIP BETWEEN IMPORT AND EXPORT COMMODITY CLASSIFICATIONS

There is a close relationship between the Export and Import Classifications which came about when they were converted to a Standard Commodity Classification base. This was in 1961 for Exports and 1964 for Imports. Both classifications retain all sections, most divisions and groups and many classes of the S.C.C. Whenever the same commodity code is used in Imports and Exports it indicates comparability, except in the case of "not elsewhere specified" (n.e.s.) classes where consideration must be given to the other classes making up the group.

The nature of external trade is such that a country usually imports different kinds of commodities than it exports. Often the exporters are fewer in number and handle larger volumes of goods, making disclosure a problem and reducing the number of classes for which data can be published. In Canada, exports are largest in crude and semi fabricated materials while imports are largest in end products. These conditions complicate attempts at comparison of import and export statistics on a class to class basis.

The tables in this volume have been arranged with import and export classes side by side to facilitate comparison of the two series. An understanding of the structure of the classification is important for anyone who seeks to trace a particular commodity. For example, take class 783-04, Bathing suits, except knitted, in the Import Classification. A few unknitted bathing suits may be exported but not in sufficient quantity to warrant the setting up of a class. Thus, anyone looking for possible exports of unknitted bathing suits would have to seek them in either class 783-97, Outerwear, children's and infants', except knitted or in class 783-99, Outerwear, except knitted n.e.s. Expressed more generally, import and export trade is usually comparable from a definition point of view at the Group level. The "n.e.s." classes serve to round out the coverage of each group and therefore are rarely comparable themselves between imports and exports. When a commodity is covered by a class in one classification but not the other, one can usually find it ruled to the "n.e.s." class of the comparable group in the other classification.

SECTIONS

The Trade of Canada Commodity Classification is divided into seven sections, the first five of which are concerned with clearly defined commodities. These sections are based on the Standard Commodity Classification. The last two sections cover special transactions.

Section I, Live Animals, contains all live animals except live fish and other seafoods shipped for use as food, which are included in Section II.

Section II, Food, Feed, Beverages and Tobacco, contains all other commodities whose chief end use is as food, feed, beverages or tobacco. Because any commodity at one stage of processing is located in only one place in this classification, certain non-food grades of chiefly food commodities (e.g. seed wheat and seed potatoes) are classified in this section, and certain food grades of chiefly non-food commodities (e.g. table salt and vegetable oils) are excluded. Within this section the commodities are further classified by component material and stage of processing.

Section III, Crude Materials, Inedible, contains all commodities whose chief use is as materials for industry, and which have not been processed beyond the stage of cleaning, sorting or concentrating, together with the synthetic equivalents of some natural materials. Waste and scrap materials which are principally used for the same purpose as particular crude materials are included with those materials; other waste and scrap materials are grouped at the end of the section. Within this section the commodities are further classified by component material.

Section IV, Fabricated Materials, Inedible, contains all commodities which have passed the preliminary stages of processing but which are still used chiefly as materials in some later industrial process. Some commodities in this section are highly processed and the chief part of their value may be derived from manufacturing. But all have in common the basic characteristic of materials, i.e., they will be subjected to (or used up in) further industrial operations in the course of which their form will be changed or their identity lost. Within this section the commodities are further classified chiefly by component material.

Section V, End Products, Inedible, contains all commodities which will not lose their identity through further processing, and which are commonly regarded as articles rather than as materials, together with finished identifiable parts, attachments and accessories of these articles. Within this section the commodities are further classified chiefly by principal use or function.

The principles underlying the distinction between fabricated materials and end products can be illustrated by considering the difference between a nail and a needle. The nail is of no use by itself; it becomes useful only in connection with other materials and then it has lost its identity from any of them. The needle, on the other hand, is used with other materials but emerges from that use still a needle which is useful again for the same purpose. In this sense the nail is a fabricated material and the needle, as a tool, an end product.

The term “parts” as used in this classification includes only components and assemblies whose end use is quite specific. It does not include such general purpose fabricated materials as nuts, bolts, hinges and other hardware which are classified as such in Section IV unless they form a minor proportion of a mixed invoice of “parts”. It also excludes such general purpose end products as motors, bearings or transformers which are separately specified in various classes of Section V. Any shipment is classified as “parts” only if it consists of a variety of commodities all intended for use in a single assembly and which can not readily be separated, or if its components are not mentioned in the classification.

Parts are treated in either of two ways. In some cases, parts of particular commodities are specified in separate classes in the same group as the commodity, or included in the “n.e.s.” class of the group (e.g. 513-, 546-). In most cases, however, both articles and their parts are included in the same class, and in these cases the class description mentions parts whenever these are known to form a significant part of the class total.

The following table illustrates how particular commodities at different stages of processing are treated in Sections III-V of this classification:

Crude Materials (III)	Fabricated Materials (IV)	End Products (V)
fur skins, undressed	fur skins, dressed	fur coats, gloves
logs	lumber, plywood, millwork	furniture, skis, matches
pulpwood	pulp, paper	books, magazines
fibres, natural or man-made	yarns, piece goods	clothing, rugs, sheets
metals in ores, metal scrap	ingots, wire, hardware	machinery, automobiles

Section VI, Special Transactions, Trade, contains certain essentially commercial transactions which are not, for various reasons, classified by commodity in trade statistics; some packing, equipment used by Canadian contractors, and small value shipments. The value of these transactions is included in published totals of Canadian exports and imports.

Section VII, Special Transactions, NonTrade, contains certain transactions which do not have an international commercial implication or which, for various reasons, are better considered separately from merchandise trade in economic analysis; e.g.: gold, settlers' effects and tourist purchases. The value of these transactions is not included in published totals of Canadian trade, but statistics are reported separately because they have independent significance.

UNITS OF MEASURE

When the Import and Export Commodity Classifications were prepared, a systematic effort was made to select units of measure which could be reported readily and were comparable, imports with exports but also where possible, with data from other surveys. As far as possible, uniform units of measure are used for all classes in a commodity group of the classification to make possible the publication of quantity data for group totals. Where common class codes are encountered, the unit of measure for the classes is the same unless an asterisk(*) appears in the unit of measure column. In these cases a footnote indicates both the Import and the Export unit of measure. Where no unit of measure is recorded the column is left blank.

LAYOUT OF THE TRADE OF CANADA COMMODITY CLASSIFICATION

The class codes in the left column are in ascending order with no indication as to whether they are Import, Export or codes common to both classifications. Class descriptions appear in the next two columns, first Imports then Exports. Blank spaces indicate the lack of either an Import or an Export class. The unit of measure appears in the final or extreme right column.

ALPHABETIC INDEX

Appendix A is an alphabetical list of all class descriptions plus selected important commodity terms that would not have been separately identified in this way. It is intended to assist users in finding specific class codes. Both the Import and the Export class codes are provided for most lines. In many cases the class code listed for either Imports or Exports may not have the same description in the classification. The explanation here is that the entry is a commodity ruling in the alphabetical index which is covered by a broader description in the classification with the same code number. Where either the Import or Export commodity code is blank the coverage is such that one code will not suffice. In these cases the user must consult the classification, being guided by the first three digits of the class code, that is provided changes in commodity classes create problems for analysts who are interested in time series.

COMMODITY TIME SERIES

Appendix B is intended primarily as a guide to persons who wish to obtain past-period comparisons for classes in both Imports and Exports. The date column gives the date on which the class was established with its present content. A class with the same description (and perhaps the same code) may have existed earlier, but before the date shown its content would have been significantly different. Alternatively, the description (and perhaps the code) of the class may have changed one or more times since the date shown, but if so its content did not alter significantly when the description (or code) was changed. The research on which this column is based has not been extended before 1919. In cases where the equivalent of a present class existed before January 1, 1919, the date 1919 is shown in brackets.

The Former Class column shows the code or codes of the classes which included substantially all of the content of a present class immediately before the present code came into use. Whenever two or more former codes appear in this column the class was established with its present coverage on the date shown. An asterisk(*) beside a former class indicates that only part of the former class is included in the new class. In these cases also the class was established with its present coverage on the date shown. When a single code appears without an asterisk(*), it indicates that on at least one occasion the code of the class was changed without there being a significant change in content of the class. In these cases the adjoining column shows the earlier date on which the class was established with its present coverage rather than the later date on which its present code was adopted.

B.T.N. AND S.I.T.C. CONCORDANCES

Trade of Canada import and export data, converted to the Standard International Trade Classification (S.I.T.C.) is available quarterly in computer printout form. The concordances tables used to produce this data are also available. For exports it amounts to an Export Classification — S.I.T.C. concordance. The concordance for imports links the Import Classification, the Canadian Customs Tariff, S.I.T.C. and the Brussels Tariff Nomenclature (B.T.N.).

**RELATIONSHIP
BETWEEN IMPORTS
AND THE
CANADIAN
INTERNATIONAL
TRADE
CLASSIFICATION**

The advent of automation in processing customs documents at the ports made it necessary to devise a more comprehensive commodity classification for input purposes. A new classification, introduced on April 1, 1972, was developed in co-operation with Revenue Canada for this purpose. It was called the Canadian International Trade Classification or C.I.T.C. There is a close relationship between the Imports Classification and the C.I.T.C. Generally, the first 5 digits of the 7 digit C.I.T.C. code correspond to the 5 digit Import code. The table shows a list of the instances where this is not the case. The C.I.T.C. was issued in two volumes.

CANADIAN INTERNATIONAL TRADE CLASSIFICATION NUMERIC INDEX
CAT. NO. 12-544

Supplements to the Canadian International Trade Classification, providing detailed explanatory notes for specific Import commodity sectors are available. They are intended for use by importers or their agents in completing customs documents. Some users of Import Trade Statistics may find them to be of interest.

At present there are no immediate plans for automating the collection of Export Statistics and therefore no concordance between C.I.T.C. and the Export Classification has been developed.

CLASSIFICATION OF COUNTRIES

For any country the area included coincides with the geographical area of the country unless otherwise stated; that is, the area includes both the customs area of the country and also any free zones or free areas in which customs control may not be exercised. Countries with which Canada's trade is small are grouped with contiguous or related areas.

DEFINITIONS AND UNITS OF MEASURE

BBL.....	Volume in barrels (for petroleum: 35 Imperial gallons or 42 U.S. gallons).
BROAD WOVEN ..	More than 12 inches in width.
CANNED.....	Preserved solely by being shut off from air.
CARAT.....	Weight in carats.
CORD.....	Volume in cords.
CWT.....	Weight in hundredweights of 100 lbs. each.
CWT N.....	For canned foods, weight of contents of cans in hundredweights of 100 lbs. each, the weight of all containers and packing being excluded.
DOMESTIC EXPORTS.....	Exports include both goods which are wholly produced in Canada and goods previously included in import statistics which have been changed in form by further processing and then exported.
DOZ.....	Number of dozens.
DZ PR.....	Number of pairs in dozens.
FT.....	Length in linear feet.
GAL.....	Volume in Imperial gallons (1 U.S. gal. = 0.83 Imp. gal.).
GROSS.....	Number in gross.
HARDWOOD.....	Wood from broad-leaved trees.
KG.....	Weight in kilograms (1 kg. = 2.2 lbs.).
LB.....	Weight in pounds.
LB N.....	For canned foods, weight of contents of cans in pounds, the weight of all containers and packing being excluded.
M.....	Number in thousands.
M B F.....	Volume in thousand board feet.
M C F.....	Volume in thousand cubic feet.
M KWH.....	Thousand kilowatt hours.
NARROW WOVEN..	Not more than 12 inches in width.
N. E. S.....	Not elsewhere specified.

NO	Number.
OZ	Weight in ounces.
PACK	Number of packs.
PAIR	Number of pairs.
P GAL	Volume of alcoholic content in terms of Imperial gallons of the strength of proof (1 U.S. P. gal. = 0.74 P. gal.).
PKG	Number of packages.
RE-EXPORTS	All exports of previously imported goods which are exported in the same condition as when imported. Minor operations such as sorting or re-packing are not considered as changing the condition of imported goods.
RF SQ	Area in roof squares.
SF3/8	Volume in square feet of 3/8" thickness, other thicknesses to be converted to the equivalent of 3/8" thickness. e.g. 10,000 sq. ft. of 3/16" plywood = 5,000 sq. ft. of 3/8" equivalent.
SF5/8	Volume in square feet of 5/8" thickness, other thicknesses to be converted to the equivalent of 5/8" thickness. e.g. 10,000 sq. ft. of 5/16" particle board = 5,000 sq. ft. of 5/8" equivalent.
SOFTWOOD	Wood from coniferous trees.
SQ FT	Area in square feet.
SQ YD	Area in square yards.
TON	Weight in short tons of 2,000 lb. each: 1 long ton = 1.12 short tons or 2,240 lb. 1 metric ton = 1.1 short tons or 2,205 lb.
TR OZ	Weight in troy ounces.
*	In unit of measure column: the units of measure are not identical for both Imports and Exports. See footnote for the Import and Export unit of measure.
*	After former class in Appendix B: only part of the former class is included with the present class.
—	In footnote: no unit of measure recorded.
